IN THE SPECIFICATION:

Kindly amend the specification at paragraph [0030] as follows:

[0030] The CPU 202 executes instructions such as those provided in memory 204 to provide various functionalities, often in conjunction with other elements of the system. A data storage medium 210 provides non-volatile data storage, and is preferably a magnetic or magneto-optic hard disk device. The input device 206 and display device 208 are conventional, and respectively facilitate user input (*e.g.*, key and/or mouse) and visual displays through which the user interfaces with the workstation 200. The network interface [[3]]212 is a conventional interface for providing network connectivity.
